

【ABSTRACT OF THE DISCLOSURE】

【SUMMARY】

The present invention relates to a slide type portable terminal. The slide type portable terminal of the present invention A slide type portable terminal comprises a main unit including separated first and second key sections and a first plate that are formed on a surface of the main unit; a display unit which includes a display screen formed on a front surface of the display unit and a second plate slid with respect to the first plate and is slid along the surface of the main unit to cause the first and second key sections of the main unit to be covered and exposed; and first and second magnets which are provided on the first and second plates, respectively, so that the same poles of the magnets face each other to provide a repulsive force when they are positioned to face (close to) each other. According to the present invention so constructed, there are advantages in that the portable terminal can be utilized more conveniently and production costs and failure rates thereof can also be reduced.
